Call brief: Granja San Pedro S.A.

L047 · Buenos Aires · Norte · maize · prepared 2026-11-07, data as of 18 Jan 2023 (week 33)

SEVERE score 100/100 · Stage 2 (critical climate alert (level Severe)) · suggested action: File insurance claim and route payout to

1. What we see

Maize is in grain fill (stage weight 0.8). Drought confirmed: 60-day rain is -3.1 SD from normal (SPI-60), soil moisture is at the 0th percentile and NDVI is 1.9 SD below this field's own history. Expected yield -34% vs normal (range -50% to -22%). Closest past season: 2017/18 (yield -24%). Risk level Severe (score 100, confidence 58%).

Outstanding	**$180,000**	Maturity	**17 Apr 2023**
Revenue / debt (p50)	**$327,988 vs $190,822 (1.72x)**	Insurance	**parametric, drought (trigger met)**
Past due	**0 days, BCRA situacion 1**	Other-bank debt	**$190,000**

2. Questions to ask

- How is the maize crop looking on the ground right now? What do you see compared with a normal year (drought is the main signal, intensity 93/100)?
- When do you expect to harvest, and what yield per hectare are you counting on? (Our model expects 5.5 t/ha, -34% vs normal.)
- Have you sold forward any of the crop? At what price, and to whom? Any storage or warrant on grain?
- Which expenses are still pending before harvest, and how much cash do you have for them?
- Do you have other debts or payments due before our maturity? (File shows other-bank debt $190,000.)
- Has the parametric insurer visited the field or been notified? Do you have the policy number and the loss-notice deadline?

3. Documents to request

- Updated crop and sowing declaration (area, date, variety).
- Field photos with date stamp, or an agronomist visit report.
- Insurance policy and any loss notice already filed.
- Forward sales contracts, warrants and storage receipts.
- Statement of other debts and upcoming obligations (last 3 months).

4. Options to discuss

File insurance claim and route payout to the loan: The parametric policy covers drought and its trigger is met; route the payout to loan L047 (61% cover). Alternatives: extend maturity to next harvest with interest-only payments; route insurance proceeds to the loan; parametric cover for next season.
