L082 · Estancia Los Cardos

score 100

Entre Ríos · Paraná · maize · $190,000 outstanding · main peril heat · no insurance

High → Severe (worse, wk 32)

Maize is in silking (stage weight 1.0). Heat: 6 days above 35 C this week during flowering. Expected yield -34% vs normal (range -43% to -11%). Closest past season: 2011/12 (yield -20%). Risk level Severe (score 89, confidence 75%).

Recommended action: Transfer / sell the loan. Stage 3 (dpd_90); weak collateral: consider selling or transferring.

L083 · Campo La Esperanza S.A.

score 100

Entre Ríos · Paraná · soy · $53,000 outstanding · main peril heat · insured (multi-peril)

High → Severe (worse, wk 31)

Soy is in flowering (stage weight 1.0). Heat: 6 days above 35 C this week during flowering. Expected yield -47% vs normal (range -53% to -43%). Closest past season: 2019/20 (yield -17%). Risk level Severe (score 90, confidence 75%).

Recommended action: File insurance claim and route payout to the loan. The multi-peril policy covers heat and its trigger is met; route the payout to loan L083 (59% cover).

L037 · Cooperativa La Victoria S.A.

score 100

Buenos Aires · Norte · soy · $200,000 outstanding · main peril drought · no insurance

High → Severe (worse, wk 31)

Soy is in flowering (stage weight 1.0). Drought confirmed: 60-day rain is -2.6 SD from normal (SPI-60), soil moisture is at the 0th percentile and NDVI is 2.9 SD below this field's own history. Expected yield -32% vs normal (range -49% to -27%). Closest past season: 2019/20 (yield +0%). Risk level Severe (score 90, confidence 58%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 90); PD is 2.3x its origination level.

L019 · Estancia Las Rosas S.A.

score 100

Santa Fe · Centro · soy · $198,000 outstanding · main peril drought · no insurance

High → Severe (worse, wk 31)

Soy is in flowering (stage weight 1.0). Heat: 5 days above 35 C this week during flowering. Expected yield -52% vs normal (range -57% to -48%). Closest past season: 2008/09 (yield -30%). Risk level Severe (score 89, confidence 92%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 89); PD is 4.7x its origination level.

L097 · Campo Los Talas S.R.L.

score 100

Córdoba · Sur · maize · $316,000 outstanding · main peril drought · no insurance

High → Severe (worse, wk 31)

Maize is in silking (stage weight 1.0). Drought confirmed: 60-day rain is -1.8 SD from normal (SPI-60), soil moisture is at the 5th percentile and NDVI is 1.5 SD below this field's own history. Expected yield -26% vs normal (range -31% to -22%). Closest past season: 2017/18 (yield -44%). Risk level Severe (score 81, confidence 64%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 81); PD is 2.1x its origination level.

L026 · Agropecuaria San Pedro S.A.

score 100

Santa Fe · Centro · soy · $162,000 outstanding · main peril drought · insured (indemnity)

High → Severe (worse, wk 31)

Soy is in flowering (stage weight 1.0). Heat: 5 days above 35 C this week during flowering. Expected yield -37% vs normal (range -42% to -32%). Closest past season: 2008/09 (yield -30%). Risk level Severe (score 79, confidence 83%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 79); PD is 2.9x its origination level.

L228 · Cooperativa La Carolina S.R.L.

score 100

Itapúa · soy · $44,000 outstanding · main peril heat · no insurance

High → Severe (worse, wk 31)

Soy is in flowering (stage weight 1.0). Drought confirmed: 60-day rain is -1.7 SD from normal (SPI-60), soil moisture is at the 10th percentile and NDVI is 2.1 SD below this field's own history. Expected yield -24% vs normal (range -29% to -16%). Closest past season: 2020/21 (yield -12%). Risk level Severe (score 79, confidence 92%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 79); PD is 1.9x its origination level.

L089 · Establecimiento San José

score 100

Entre Ríos · Paraná · soy · $83,000 outstanding · main peril heat · insured (multi-peril)

High → Severe (worse, wk 31)

Soy is in vegetative (stage weight 0.7). Drought confirmed: 60-day rain is -2.5 SD from normal (SPI-60), soil moisture is at the 0th percentile and NDVI is 3.1 SD below this field's own history. Expected yield -43% vs normal (range -52% to -22%). Closest past season: 2008/09 (yield -33%). Risk level Severe (score 79, confidence 92%).

Recommended action: File insurance claim and route payout to the loan. The multi-peril policy covers drought and its trigger is met; route the payout to loan L089 (79% cover).

L001 · Estancia Tres Lagunas

score 100

Santa Fe · Centro · maize · $308,000 outstanding · main peril drought · insured (indemnity)

High → Severe (worse, wk 31)

Maize is in silking (stage weight 1.0). Heat: 6 days above 35 C this week during flowering. Expected yield -26% vs normal (range -51% to +3%). Closest past season: 2008/09 (yield -11%). Risk level Severe (score 78, confidence 70%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 78); PD is 2.2x its origination level.

L004 · Campo Santa Elena S.A.

score 100

Santa Fe · Centro · soy · $105,000 outstanding · main peril drought · no insurance

High → Severe (worse, wk 31)

Soy is in vegetative (stage weight 0.7). Drought confirmed: 60-day rain is -1.9 SD from normal (SPI-60), soil moisture is at the 0th percentile and NDVI is 1.9 SD below this field's own history. Expected yield -34% vs normal (range -46% to -19%). Closest past season: 2010/11 (yield -8%). Risk level Severe (score 72, confidence 58%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 72); PD is 2.3x its origination level.

L200 · Campo El Sauce Ltda.

score 100

Rio Grande do Sul · Missões · soy · $174,000 outstanding · main peril drought · no insurance

High → Severe (worse, wk 31)

Soy is in vegetative (stage weight 0.7). Drought confirmed: 60-day rain is -2.2 SD from normal (SPI-60), soil moisture is at the 0th percentile and NDVI is 1.6 SD below this field's own history. Expected yield -26% vs normal (range -30% to -16%). Closest past season: 2011/12 (yield -8%). Risk level Severe (score 72, confidence 47%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 72); PD is 2.0x its origination level.

L102 · Estancia La Carolina S.A.

score 100

Córdoba · Sur · maize · $93,000 outstanding · main peril drought · insured (parametric)

High → Severe (worse, wk 30)

Maize is in silking (stage weight 1.0). Drought confirmed: 60-day rain is -2.3 SD from normal (SPI-60), soil moisture is at the 0th percentile and NDVI is 2.2 SD below this field's own history. Expected yield -39% vs normal (range -44% to -34%). Closest past season: 2017/18 (yield -44%). Risk level Severe (score 82, confidence 67%).

Recommended action: File insurance claim and route payout to the loan. The parametric policy covers drought and its trigger is met; route the payout to loan L102 (43% cover).

L115 · Granja La Querencia

score 100

Córdoba · Sur · soy · $95,000 outstanding · main peril drought · no insurance

High → Severe (worse, wk 30)

Soy is in vegetative (stage weight 0.7). Drought confirmed: 60-day rain is -3.0 SD from normal (SPI-60), soil moisture is at the 0th percentile and NDVI is 3.0 SD below this field's own history. Expected yield -45% vs normal (range -50% to -40%). Closest past season: 2017/18 (yield -50%). Risk level Severe (score 76, confidence 92%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 76); PD is 3.5x its origination level.

L108 · Granja Santa Elena

score 100

Córdoba · Sur · soy · $89,000 outstanding · main peril drought · insured (indemnity)

High → Severe (worse, wk 30)

Soy is in vegetative (stage weight 0.7). Drought confirmed: 60-day rain is -1.6 SD from normal (SPI-60), soil moisture is at the 0th percentile and NDVI is 2.5 SD below this field's own history. Expected yield -32% vs normal (range -37% to -28%). Closest past season: 2008/09 (yield -19%). Risk level Severe (score 76, confidence 50%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 76); PD is 2.4x its origination level.

L051 · Cooperativa La Celina

score 96

Entre Ríos · Paraná · maize · $228,200 outstanding · main peril drought · insured (indemnity)

High → Severe (worse, wk 30)

Maize is in silking (stage weight 1.0). Heat: 7 days above 35 C this week during flowering. Expected yield -40% vs normal (range -45% to -16%). Closest past season: 2008/09 (yield -36%). Risk level Severe (score 89, confidence 67%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 89); PD is 3.1x its origination level.

L220 · Cooperativa La Esperanza S.A.

score 90

Rio Grande do Sul · Missões · soy · $171,000 outstanding · main peril drought · no insurance

High → Severe (worse, wk 31)

Soy is in flowering (stage weight 1.0). Heat: 1 days above 35 C this week during flowering. Expected yield -23% vs normal (range -27% to -18%). Closest past season: 2020/21 (yield -15%). Risk level Severe (score 70, confidence 69%).

Recommended action: Transfer / sell the loan. Stage 3 (dpd_90); weak collateral: consider selling or transferring.

L088 · Cooperativa Los Molles S.A.

score 88

Santa Fe · Centro · maize · $63,000 outstanding · main peril drought · insured (indemnity)

High → Severe (worse, wk 30)

Maize is in vegetative (stage weight 0.7). Drought confirmed: 60-day rain is -1.4 SD from normal (SPI-60), soil moisture is at the 19th percentile and NDVI is 2.5 SD below this field's own history. Expected yield -29% vs normal (range -35% to -11%). Closest past season: 2019/20 (yield -9%). Risk level Severe (score 71, confidence 92%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 71); PD is 2.3x its origination level.

L218 · Agropecuaria Los Molles S.A.

score 85

Rio Grande do Sul · Missões · soy · $229,000 outstanding · main peril drought · no insurance

High → Severe (worse, wk 31)

Soy is in vegetative (stage weight 0.7). Drought confirmed: 60-day rain is -3.1 SD from normal (SPI-60), soil moisture is at the 0th percentile and NDVI is 1.3 SD below this field's own history. Expected yield -18% vs normal (range -22% to +6%). Closest past season: 2011/12 (yield -8%). Risk level Severe (score 75, confidence 58%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 75); PD is 1.7x its origination level.

L224 · Campo Los Talas

score 85

Rio Grande do Sul · Missões · soy · $130,000 outstanding · main peril drought · no insurance

High → Severe (worse, wk 31)

Soy is in vegetative (stage weight 0.7). Drought confirmed: 60-day rain is -2.7 SD from normal (SPI-60), soil moisture is at the 5th percentile and NDVI is 1.6 SD below this field's own history. Expected yield -18% vs normal (range -22% to +6%). Closest past season: 2011/12 (yield -8%). Risk level Severe (score 75, confidence 41%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 75); PD is 1.7x its origination level.

L006 · Establecimiento La Esperanza

score 84

Entre Ríos · Paraná · soy · $380,000 outstanding · main peril heat · no insurance

High → Severe (worse, wk 33)

Soy is in flowering (stage weight 1.0). Heat: 6 days above 35 C this week during flowering. Expected yield -40% vs normal (range -45% to -36%). Closest past season: 2021/22 (yield -7%). Risk level Severe (score 84, confidence 92%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 84); PD is 3.3x its origination level.

L076 · Agropecuaria El Trébol S.R.L.

score 81

Santa Fe · Centro · soy · $117,000 outstanding · main peril drought · no insurance

High → Severe (worse, wk 32)

Soy is in vegetative (stage weight 0.7). Drought confirmed: 60-day rain is -2.3 SD from normal (SPI-60), soil moisture is at the 0th percentile and NDVI is 1.9 SD below this field's own history. Expected yield -34% vs normal (range -47% to -20%). Closest past season: 2017/18 (yield -38%). Risk level Severe (score 75, confidence 47%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 75); PD is 2.7x its origination level.

L203 · Agropecuaria Los Talas Ltda.

score 81

Rio Grande do Sul · Missões · soy · $164,000 outstanding · main peril drought · insured (indemnity)

High → Severe (worse, wk 32)

Soy is in vegetative (stage weight 0.7). Drought confirmed: 60-day rain is -2.4 SD from normal (SPI-60), soil moisture is at the 5th percentile and NDVI is 2.4 SD below this field's own history. Expected yield -16% vs normal (range -21% to +8%). Closest past season: 2011/12 (yield -8%). Risk level Severe (score 72, confidence 47%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 72); PD is 1.6x its origination level.

L038 · Cooperativa La Blanqueada S.R.L.

score 76

Buenos Aires · Norte · soy · $150,000 outstanding · main peril drought · insured (indemnity)

High → Severe (worse, wk 33)

Soy is in flowering (stage weight 1.0). Drought confirmed: 60-day rain is -2.9 SD from normal (SPI-60), soil moisture is at the 0th percentile and NDVI is 1.8 SD below this field's own history. Expected yield -18% vs normal (range -22% to +2%). Closest past season: 2008/09 (yield -28%). Risk level Severe (score 76, confidence 75%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 76); PD is 1.7x its origination level.

L066 · Granja La Margarita

score 75

Buenos Aires · Norte · soy · $245,000 outstanding · main peril drought · no insurance

High → Severe (worse, wk 33)

Soy is in flowering (stage weight 1.0). Drought confirmed: 60-day rain is -1.5 SD from normal (SPI-60), soil moisture is at the 5th percentile and NDVI is 1.5 SD below this field's own history. Expected yield -26% vs normal (range -31% to -22%). Closest past season: 2019/20 (yield +0%). Risk level Severe (score 75, confidence 83%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 75); PD is 2.1x its origination level.

L205 · Granja El Porvenir Ltda.

score 75

Rio Grande do Sul · Missões · maize · $117,600 outstanding · main peril drought · no insurance

High → Severe (worse, wk 33)

Maize is in grain fill (stage weight 0.8). Drought active: 60-day rain is -2.7 SD from normal (SPI-60), soil moisture is at the 5th percentile and NDVI is 1.3 SD below this field's own history. Expected yield -40% vs normal (range -55% to -33%). Closest past season: 2008/09 (yield -42%). Risk level Severe (score 75, confidence 41%).

Recommended action: Restructure / extend maturity. Maturity in 7 weeks but expected yield is -40%; repayment capacity will not recover in time.

L008 · Estancia Las Lomas S.R.L.

score 74

Entre Ríos · Paraná · soy · $271,000 outstanding · main peril drought · no insurance

High → Severe (worse, wk 33)

Soy is in vegetative (stage weight 0.7). Drought confirmed: 60-day rain is -2.5 SD from normal (SPI-60), soil moisture is at the 5th percentile and NDVI is 2.0 SD below this field's own history. Expected yield -40% vs normal (range -44% to -35%). Closest past season: 2011/12 (yield -23%). Risk level Severe (score 74, confidence 58%).

Recommended action: Confirm Stage 2 classification. Critical alert (score 74); PD is 3.0x its origination level.
